3239 (4-terminal Ω function)

3238 (Advanced model)

3237 (Economically priced)

Component measuring instruments

Outstanding performance for production lines with a sampling rate of 3.3 ms

High-speed DMM

The **DIGITAL HiTESTERs 3237, 3238, and 3239** can perform 3.3 ms high-speed sampling, and come equipped with a comparator, external input and output, and an RS-232C interface. These three high-performance DMMs can be used not only in laboratories, but in production lines that require the minimal tact time.

The **3237** is the basic model, and is equipped with the basic necessary functions. The **3238** is a high-precision, broadband model that also features current measurement terminals and a frequency measurement function. The **3239** includes the functions of the **3238** plus the 4-terminal resistance measurement function. All three units are designed with emphasis on measurement speed and safety.

High-speed Performance and Reliability

Features

- Samples at rates of up to 300 samples/sec. (3.3 ms/sample)
- Comparator function provides high-speed pass/fail evaluation
- Equipped with external input and output for sequence control
- Useful Save/Load function helps work go faster

The 3237, 3238 and 3239 are equipped with a variety of functions that help minimize tact time in production lines.

For details, see page 2.

■ Low power resistance measurement function prevents sample deterioration

The 3237, 3238 and 3239 use a low power Ω function to minimize sample degradation when measuring resistance.

With this function, open terminal voltage never goes over 0.45 V DC, and measurement current never surpasses 100 μ A DC.

For specifications, see pages 5 and 6.

■ True RMS value measurement

Both the 3237 and 3238 use true RMS measurement for determination of distorted waveforms. In fact, HIOKI guarantees accuracy of the 3238 and 3239 for AC voltage of 10 Hz to 300 kHz, and AC current of 10 Hz to 30 kHz.

For specifications, see pages 5 and 6.

■ Interface supports full remote operation

Measurement can be automated by using a controller to operate the 3237 or 3238 through the GP-IB or RS-232C interface.

For details, see page 3.

The high-accuracy & multi-functional **3238**

✓ DC V basic accuracy: $\pm 0.01\%$ rdg. ± 2 dgt.

✓ Includes frequency measurement for AC and DC A

For 4-terminal resistance measurement **3239**

Efficient Evaluation Testing

PC measurement using the high accuracy and broad coverage of the 3238 and 3239

Example of data processing with Microsoft Excel

Highly accurate measurement with minimal drift

The unit uses self-regulation to suppress drift. Also, the DMM is ideal for collecting data over extended periods of time.

Using Excel for efficient data processing

The DMM supports fast data processing by allowing you to transfer data directly to a worksheet through either the GP-IB or RS-232C interface.
